

DATA SHEET: DIGITEXX SERVER SOFTWARE

Digitexx Server Software

Our server software is the on-site partner of our remote client software. It publishes data directly to the remote client, which eliminates the need for routine site visits and visual inspections of the structure. When an event occurs, it identifies the area most impacted by the event, reducing discovery time and streamlining manpower. Other important benefits include:

- Remote, web-based configuration, which allows the user to update the server settings without having to be on site.
- FTP data record distribution, which automatically archives data on a remote site, ensuring data integrity.
- Email notifications of events and alerts are distributed to a user groups that can be defined however the user wishes.
- Custom web portal option allows for customization of user groups and easy system modification.
- Remote data retrieval FTP and firewall configuration supports high-security applications.

In summary, the Digitexx Server software provides an automated, on-site data recorder and analyzer that actively monitors a structure and allows manpower and focus to be deployed elsewhere between events.
